Import Permit and Federal Phytosanitary Certificate required.

REQUIREMENTS FOR CERTIFYING FRUIT FROM CA –

Fruit may only be shipped between the months of May through October.

Fumigation with methyl bromide is required prior to entering South Africa.

Fumigation may be done at origin or upon arrival in South Africa. A certificate issued by a recognized fumigation company must accompany shipment, if the fumigation is done at origin.

AD Required: “TETRANYCHUS VIENNENSIS is not known to occur in the United States. The state of production (California) is free from GUIGNARDIA BIDWELLI, BREVIPALPUS CHILENSIS, BREVIPALPUS LILIUM, EOTETRANYCHUS PRUNI, TETRANYCHUS CANADENSIS, TETRANYCHUS SCHOENEI, TETRANYCHUS TUMIDUS, ANASTREPHA FRATERCULUS, BACTROCERA TYRONI, EPIPHYAS POSTVITTANA, EUPOECILIA AMBIGUELLA, LOBESIA BOTRANA, PHALAENOIDES GLYCINAE, AND POLYCHROSIS VITEANA. The consignment was inspected and found free from CONIELLA DIPLODIELLA, ARGYROTAENIA CITRANA, AMELOIS TRANSITELLA, CNEPHASIA LONGANA, HELICOVERPA PUNCTIGERA, MACONELLICOCCUS HIRSUTUS, OTIORHYNCHUS SULCATUS, PARTHENOLECANIUM CORNI, PSEUDOCOCCUS MARITIMUS, PLATYNOTA SULTANA. The consignment was sampled according to the procedure in the addendum: Inspection Procedures and Penalty Clause for VITIS SPP. fruit from the state of California, U.S.A.”

AND (if treatment is done prior to shipping):

“The consignment was fumigated with methyl bromide to ensure freedom from BREVIPALPUS LEWISI, EOTETRANYCHUS CARPINI, EOTETRANYCHUS SEXMACULATUS, EOTETRANYCHUS WILLAMETTI, TETRANYCHUS MCDANIELI, and TETRANYCHUS PACIFICUS.”

INSPECTION PROCEDURE AND PENALTY CLAUSE –

Sample Size:

Inspection Lot Size	Biometric Sample Size
0 to 160 Cartons	25 Cartons
160 to 800 Cartons	50 Cartons
800 Cartons or more	75 Cartons

INSPECTION METHOD:

1. Establish the inspection unit: Total number of cartons to be shipped (inspection lot size) divided by the correct Biometric sample size (number of cartons) equals the 'sampling interval.'
2. Randomly select a number between 1 and the answer above ('sampling interval'). This is the number of the 1st carton to be selected for inspection.
3. To determine the 2nd carton, add the 'sampling interval' to the 1st carton number, the result will be the number of the 2nd carton to be sampled.
4. To determine the 3rd carton, add the 'sampling interval' to the 2nd carton number, the result will be the number of the 3rd carton to be sampled.
5. Continue this process until you have inspected the entire required 'biometric sample' number of cartons listed in the chart above.

PENALTY CLAUSE:

- A 'first 10 period' will be established for producers. This consists of the first 10 consignments submitted for inspection at the beginning of the season.
- During the 'first 10 period,' suspension/termination from the program (for the entire season) for a producer occurs when 3 separate consignments presented for inspection are rejected (per commodity, regardless of variety or cultivar).
- If the producer has a rejection rate of more than 25%, after 10 inspections, the producer will be eliminated for the season.

Applications for Import Permits should be made at least 30 days prior to the arrival date of the importation. Applications must be written, typewritten, or printed in one of the official languages of South Africa (English is ok). Must be legible and complete and list common names & scientific names. For IP application address, refer to one of the previous summaries.

All shipments are subject to inspection upon arrival whether or not they are accompanied by a Phytosanitary Certificate. If the product is found to be infested or infected with insects or diseases, the shipment may be treated, destroyed, or reexported.

***Grapes shipped from November thru April are PROHIBITED.**

SUBSIDIARY INFO –

Phytosanitary Certificates must be issued within 14 days of shipment. No alterations or erasures allowed
